Deep Fathom

SAME SMALL BUSINESS CONFERENCE
CHARLOTTE · NOVEMBER 4–6, 2026
BOOTHS 1935 AND 1937

THE DEEP FATHOM COMPLIANCE PLATFORM

Keep CMMC work and evidence together.

More Rigor. Radically Less Effort.

Deep Fathom helps your team organize requirements, assign the work, and keep the evidence behind it. See what's complete, what remains open, and who owns the next step.

For defense contractors preparing for Cybersecurity Maturity Model Certification (CMMC).

Your prime asks for your SPRS score and your plan to close gaps.

Has it happened yet? The same record answers a customer or an assessor too.

ILLUSTRATIVE WORKFLOW

Start with the requirement 01

Identify the NIST SP 800-171 requirements and the systems in scope. Bring in your advisor if you have one.

Give the work an owner 02

Record the actions needed, with owners and due dates. Your team can see the open work.

Connect the evidence 03

Link documents and technical records to each requirement as the work gets done.

Review before responding 04

Check remaining gaps. Prepare a response grounded in the record.

Less of the work lands on your team

All 110 NIST SP 800-171 requirements and 320 assessment objectives come built in, so nobody starts from a blank spreadsheet. Requirements, tasks, owners and evidence live in one record.

AI carries the work forward. Your people review the evidence and sign off.

Security and platform experience

Deep Fathom was founded by Steven Hess and Kevin Hunt, the former CEO and CTO of Cloud Storage Security.

See the work behind your compliance record.

Bring one requirement or evidence challenge to a walkthrough. We'll show how Deep Fathom helps organize the work and discuss what fits your team.
